SUMMARY

Hi, I'm Shahabaj Khan, a Data Scientist specializing in end-to-end AI development—from data pipelines and model training to frontend integration. I work with Python, Machine Learning, Computer Vision, LLMs, and React to create high-performance, user-centered applications.

SKILLS

Programming Languages: Python, Javascript, C++, SQL

Libraries & Tools: Langchain, Groq, Pandas, Numpy, Matplotlib, Seaborn, Plotly, Sckitlearn, PyTorch, YOLO, OpenCV, MediaPipe, PyGame, PowerBI

ML: Data Engineering, Regression, Classification, Clustering, Data Visualization, Model Deployment, CNN, Transformers, KNN, DNN

Web Stacks: Flask, FastApi, VectorDB, NodeJS, ReactJS, MongoDB, MySQL

EXPERIENCE

Data Science Intern | Futures Intern, 2025

Hands-on experience in Data Science, working on real-world datasets and practical use cases. Gained exposure to data cleaning, exploratory data analysis (EDA), and basic machine learning models. Worked with Python, pandas, NumPy, and visualization tools to analyze and interpret data. Developed foundational skills in deriving insights and presenting results effectively.

PROJECTS

Resume Scorer

Tools & Technologies: Vector DB, Python, Sentence Transformer, React

Create and deployed end to end site where user gets score for there resume on the bases of there target Job. Used React for frontend which sends pdf to Fast API backend in byte data then it extract text from pdf next it get converted to embaddings and saved to vectorDB next calculated vector distance for target job and return percentage matching to show score.

Web-based Image Editor with AI powers

Tools & Technologies: YOLO, OpenCV, React, Fast API

It auto detects faces from uploaded image and blur them (used in sensitive images). It can blur whole image also & resize them without destortion of ratio

Link: shahabaj.onrender.com/#/projects/image_editor

Stone-Paper-Scissor Game using Hand Gesture Recognition

Tools & Technologies: Python, OpenCV, Mediapipe, NumPy

Built an interactive Stone-Paper-Scissor game controlled by hand gestures using Mediapipe for real-time detection. Implemented gesture recognition and game logic for automatic move identification and scoring. Processed video frames with OpenCV/NumPy for smooth tracking and real-time feedback.

AI Assistance Chat Bot: RAG System

Tools & Technologies: Python, Groq, SentenceTransformer, VectorDB, React

Developed an AI chatbot using Groq for real-time query handling. Used vectorDB for searching NN.

EDUCATION

Masters of Computer Applications (MCA), Lovely Professional University

CERTIFICATES

Deep Learning by Simplilearn

Getting Started with Machine Learning Algorithms

Full Stack Web Development Bootcamp

Power BI for Beginners
