ML ENGINEER

shahabaj773@gmail.com

github.com/meShahabaj

shahabaj.onrender.com

Summary

Machine Learning Engineer with hands-on experience building and deploying ML and LLM-based applications. Strong in Python, Computer Vision, RAG systems, and deployment on FastAPI-based backends. Delivered predictive and AI-driven systems that translate data into actionable insights.

Skills

Programming Languages: Python, SQL, JavaScript

Libraries & Tools: Langchain, Groq, Pandas, NumPy, Scikit-learn, PyTorch, YOLO, OpenCV, VectorDB, BI

ML: Data Engineering, Regression, Classification, Clustering, Visualization, Model Deployment

Web Stacks: FastAPI, React, MySQL

Experience

Data Science Intern | Futures Intern, 2025

- Analyzed 7,000+ salary records spanning 20+ job titles to identify key compensation drivers
- Trained and evaluated multiple machine learning models; selected CatBoost as the best-performing approach
- Achieved approximately 7% prediction error (state metric: RMSE / MAPE if possible) on validation data
- Deployed the model using a FastAPI backend and React frontend for real-time user interaction

Projects

Online Image Editor with AI capability

Tools & Technologies: YOLO, OpenCV, React, FastAPI, Python

- Preprocessed 30,000+ annotated human images using augmentation techniques such as rotation and flipping
- Fine-tuned a YOLOv8 model for face detection and optimized it by exporting to ONNX format
- Developed an AI-powered image editor enabling automatic face blurring, full-image blur, and image resizing
- Eliminated manual face selection, improving usability and processing speed
- Ensured privacy-first design with no image storage

Resume Scorer: know Your Resume

Tools & Technologies: Vector DB, Python, Sentence Transformer, React

- Deployed end-to-end resume scoring system that matches resumes with target job descriptions using semantic similarity
- Implemented PDF text extraction, embedding generation, and vector similarity search to calculate job – resume match percentage
- Built a FastAPI backend to process resume files and a React frontend for user interaction
- Deployed the application as a live web tool enabling users to evaluate resume relevance instantly

AI Assistance Chat Bot: RAG System

Tools & Technologies: Python, Groq, SentenceTransformer, VectorDB, React

- Built a personal AI assistant chatbot using a RAG architecture to answer user queries accurately
- Embedded structured personal data using Sentence Transformers and stored it in a Vector Database
- Retrieved relevant context via similarity search and passed it to the Groq API (GPT-4) for response generation
- Implemented PII masking using regex to protect sensitive information

Education

Masters of Computer Applications (**MCA**)

Lovely Professional University

Certificates

- Deep Learning by Simplilearn
- Getting Started with Machine Learning Algorithms
